TOZENFLEX
FLEXIBLE RUBBER JOINT

FEATURES

● APPLICABLE TO BOTH SUCTION AND DELIVERY (DISCHARGE) WITH ITS EXCELLENT STABILITY AND PRESSURE RESISTANCE
With the combination of excellent moulding technique and tough chemical fiber, TOZENFLEX can be used at a bursting pressure of over 780psi (55kgf/cm²) and within max. internal pressure of 240psi (16kgf/cm²). In addition, since it can satisfactorily withstand the force of creating a vacuum of 650mmHg for 32A-300A and 375mmHg for 350A and 400A, it can be used on both delivery and suction sides. Also since its caracass is of a special spherical type, it will not come in contact with the connecting bolt heads even if it expands. This connector can be used with a sense of security even when subjected to high pressure.

● EXCELLENT TEMPERATURE RESISTANCE
Since this connector is made of heat resisting synthetic rubber of special composition, which is superior to natural or chloroprene rubber, its deterioration due to hot water is quite limited and it exhibits a stable pressure withstandability persistently.

● EXCELLENT ABILITY TO ISOLATE SOUND AND VIBRATION
The highly soft caracass effectively isolates vibration and solid sound in all directions.

● OTHER ADVANTAGES AND EFFECTS
1) Needs neither gasket nor packing.
2) Since flanges used are of loose fit type, they can be installed in pipes easily.
3) Its ability to absorb elongation and compression of pipes caused by variation in temperature prevents the piping system and equipment from breaking down.
4) It absorbs the pulsation of water and prevents water hammering to some extent.

TYPICAL APPLICATIONS
This joint is applied to the piping system for construction equipment and industrial plants where noise and vibration isolation as well as alignment between pipes are required.

Examples:
1) Air-conditioning and sanitary equipment
2) Industrial plant equipment
3) Marine piping systems: Feed-water and drainage equipment, etc.
4) Various plant piping systems: power generation plants, chemical plants, etc.

** Please note that TOZENFLEX is not applicable to oil, circulation pump for pool water, air, gas nor hot water supply line. **

APPLICABLE FLUID

● Applicable Fluid: water, hot water, sea water, weak acid, weak alkaline, etc.
● Please apply within the operating conditions in pressure and temperature.

STRUCTURE

---

- The table below provides a summary of the parts and materials used in TOZENFLEX.

<table>
<thead>
<tr>
<th>No.</th>
<th>Parts</th>
<th>Standard Materials</th>

</tbody>
</table>

- Flanges JIS10K, ANSI 150 and PN16 are standard, except ANSI 150 for the size 20&32 mm are not produced.
- Flange material can be changed to SUS304 and SUS 316.
- The products are not applicable to oil. However, it may be possible by changing the rubber material. Please consult us.
Dimension and Allowable Movement

T.M. = Transverse Movement  
A.E. = Axial Elongation  
A.C. = Axial Compression  
A.M. = Angular Movement  
**Although allowable movements are given, do not allow them for axial elongation when installing the joints for suction purpose.**

Operating Condition

- Use the products within the given allowable movements.  
- Tolerances for installation are included in the allowable movements (Allowable movements = Tolerances for installation + Operating movements)  
- Please note that information in the above table are for single movement only. In case of complex movements, some correction is required

Bursting Pressure

- 20~300 mm : 5.3 MPa or above at normal temp.  
- 350 & 400 mm : 4.0 MPa or above at normal temp.

Notes

1. Information in the above table is for single displacement only. In case of complex displacement, follow the below expression.

\[
C.El(C) = A.El(C) \times \{1 - (A.T.M. \times A.A.M. - A.M.)\}
\]

- C.El(C) = Correct Elongation (Compression)  
- A.T.M. = Transverse Movement  
- A.El(C) = Allowable Elongation (Compression)  
- A.A.M. = Allowable Angular Movement  
- A.T.M. = Allowable Transverse Movement  
- A.M. = Angular Movement

2. Install the joint according to the above given allowable dimensions.

Control Unit

In case of the following conditions, control unit is recommended to use for protection of connectors.

- In case that it is hard to support reaction force (thrust) by pressure during the test operation or normal operation.  
- In case that transverse movement is anticipated more than the designed movement.  
- In case that the connectors are anticipated to be compressed when installation.

Example of Installation
